LDisk™

LDisk™ Adds iSCSI Target Storage capability to Windows Home Server-2011, Windows Storage Server-Essentials, SBS-2011-essentials, and Windows Server 2012-Essentials. Using LDisk™, you can create a single appliance to provide all your storage and backup needs. Create a Unified Storage by adding LDisk™ to Windows Storage Operating systems (WHS-2011, WSS-e, SBS-2011e, WS-2012e). In addition to adding iSCSI Target, LDisk provides an advanced disk pooling technology and ability to expand your Storage beyond one box through Ethernet interface. You can have your expansion unit at any distance or even a different building.

Create your own SAN

Add iSCSI to your server
I couldn't believe it is that easy to have a SAN

Ease of Use

I never needed a manual to use this thing.

Virtualization

I don't have to worry about managing individual drives. I always know how much storage I have used, how much is left and just use any amount I need until I run out.

Expandability

I don't need to worry about if I run out of storage. I start with 5 or 10TB, and add to it when I need more.

Protect your data

I have NAS or iSCSI Volume redundancy that protects my data against drive failures.
